

Full Service Pharmacy Benefits Management Program

Pharmacy Benefits Management

Specialty Solutions Rx is a Pharmacy Benefit Management company (PBM) that was developed to proactively address opioids and other high risk medications within the workers' compensation market. The program offers a national retail pharmacy network of over 68,000 pharmacies as well as access to a workers' compensation specialty pharmacy for targeted use on complex claims.

The dispensing pharmacists at the workers' compensation specialty pharmacy are focused on the pain management needs of injured workers. They provide a collaborative approach by educating injured workers on the adverse effects of opioids and other high risk medications and discussing proper treatment plans with the prescribing physicians. These interventions happen real time, prior to dispensing the medication.
