

Full Service Pharmacy Benefits Management Program

Program Benefits

What makes Specialty Solutions Rx unique? We designed a PBM to handle not only your simple claims but more importantly the complex claims, especially those involving opioids and other high-risk medications that drive up costs. Our program uses dispensing pharmacists with pain management expertise to educate injured workers and assist prescribing physicians during the recovery process. The pharmacists proactively engage in a clinical two-point collaboration with the injured worker and treating physician. This assures proper pain management and avoids unnecessary exposure to high risk medications such as opioids.

The Specialty Solutions Rx innovative model offers a total solution, including prospective processes to better manage opioid activity, improve return-to-work and lower costs.

The key benefits to using the Specialty Solutions Rx model include the following:

Program Access - National access to 68,000 retail pharmacies as well as a dedicated workers' compensation specialty pharmacy

Better Management of High Risk Mediations - Our use of dispensing pharmacists dedicated to the needs of injured workers proactively addresses high risk situations prior to dispensing the medication

Reduction in Opioid Use - We address opioid use on the front end prior to dispensing the medication by educating the patient and collaborating with the physician

Improved Health & Safety for Injured Workers - No one can afford addiction or unnecessary exposure to addictive medications. Our pharmacists are proactive, they educate injured workers and reduce the long-term use of these medication that can have an adverse effect on their health and overall lives

Improved Return to Work - A reduction in long term opioid use as well as employee education and engagement leads to earlier return to work

Cost Containment and Savings - Most workers' compensation pharmacy benefit programs focus on discounting pill prices and restricting medications. The injured worker is often lost in the equation. We know that educating and collaborating with injured workers will lead to improved outcomes and savings of medication costs and overall claims costs

Strategic Out-of-Network Recruitment - Specialty Solutions Rx uses a thorough telephonic and mail outreach program to contact injured workers directly in an effort to recruit them in-network and drive program compliance
